Response to Clarification on the BOQ by East Africa Aquatech Drilling Ltd, dated Wednesday, November 13, 2019 on the - Nasal Napitiro Water Project

One of the prospective bidders (East Africa Aquatech Drilling Ltd) sought clarification on the following item of the BOQ. E-mail from the prospective bidder is attached (attachment 1).

Clarification

1. Since the pump indicated, Dayliff DS 8/50 has an outlet of 2" do you intend for the outlet pipes to be reduced to 1 1/4" or is it an oversight that can be amended?

2. The quantity of dayliff drop pipes is listed as only 5 which would imply that the pump is to be installed at only 15 metres. Please clarify the correct number to be used; for example 46 to match with the length of the submersible cable.

3. List of pre-tender visits attendance

Response

1. Since the pump indicated, Dayliff DS 8/50 has an outlet of 2" do you intend for the outlet pipes to be reduced to 1 1/4" or is it an oversight that can be amended?

Please note that this is not an oversight but intentional. After test pumping, amendments may be done on the pipework depending on the obtained yields. In the contract we will have rates for the 2" and 1 1/4" and in case of any change new rates won’t be required from the contractor. Therefore the bidders are instructed to price the items as they are in the BOQ item.

2. The quantity of dayliff drop pipes is listed as only 5 which would imply that the pump is to be installed at only 15 metres. Please clarify the correct number to be used; for example 46 to match with the length of the submersible cable.

The estimated quantity of dayliff drop pipes are 55 and not 5. This is a measured contract and only what will be installed will be paid. Exact quantity of the drop pipes will be determined on site during installation.

3. Attendance list of pre-tender site visit to Napitiro and Nasal - See attachment 2.

--- Forwarded Message ---

We would like to seek clarification on the BOD on the following items:

Dear Sir/Madam,

Regarding the BOD, we have encountered an issue with the calculation. The BOD should be calculated based on the formula:

\[ BOD = \frac{V \times C}{1000} \]

Where:
- \( V \) is the volume of water in liters
- \( C \) is the concentration of BOD in mg/L

Please provide the correct calculation method and any necessary adjustments.

Best regards,
